

Locating Fire Rated Joint Systems

1. Click on "Find Joint Systems"

2. When you do not know the assembly number (most common search). "Search for System No."

Example: I need to find a dynamic fire rated joint that occurs between the top of a U401 wall (head of wall-"HW") and a D905 floor-ceiling assembly.

IMPORTANT: [click here to understand joint basics and the numbering system](#)

Enter "HW-D-0*", Click on "Search".

This will find all dynamic head of wall joints with a gap ≤ 2". In order to find the assemblies in question proceed to the next step.

Search for System No.

hw-d-0*

[Numbering System for Joint Systems](#)

SEARCH HINTS: To search for a particular system, enter the system number above. To search for a series of systems in this category, enter the alphabetical prefix or prefixes followed by an *, such as WW*, WW-D*, or WW-D-1*. Refer to the numbering system to identify suitable system numbers. If your initial search yields an excessive number of matches, select "Refine Your Search" and tighten the search parameters using the desired hourly rating, company name of components used in the system, and other key words.

Hint:
Many joints are typically less than 2" wide. Start your search by using "0*".

3. Click on "Refine Your Search" at the top of the list
