

Performance Analytics Trending Hub (PATH™)

UL is turning DATA INTO KNOWLEDGE

UL's Performance Analytics & Trending Hub (PATH™) is designed to provide in-depth, real-time data mining and trending capabilities. PATH provides retailers and brand owners deep visibility into their program data to evaluate both supply chain and product performance in one easy-to-use online platform.

PATH offers global access to vital information and customized reporting all in one place to help effectively manage and improve sourcing and quality for products and suppliers in a cost effective manner. With PATH, users can:

- Analyze current and historical audit, inspection, and test results
- Compile and house searchable archives of report data
- Segment data through multiple filters for custom views
- View, drill down, and export data in graph or grid view
- Receive automated notifications for new data uploaded into system
- Compare and rank supply chain members and products
- Establish security to determine what data is visible to each user

Filter, track, and compare product and supplier performance on demand and in real time

For more information on how UL can help you improve supply chain visibility and operational efficiency, email QAinfo@ul.com.

PATH also tracks a number of **Key Performance Indicators (KPIs)**, providing users with on-demand, point-and-click access to:

- Vendor Scorecards
- Product Performance Reports to SKU Level
- Audit Reports
- Failure Management Reports
- Overall Performance Reports
- Inspection Vendor and Product Reports
- Custom Reporting via Export Data Utility

View graphical or grid displays for program snapshots and executive reporting

Point-and-click ranking of performance Month over Month, Quarter over Quarter, or Year over Year
